## IMPORTANT

Relative to changing of elevations and roof style, etc., for any stock plan in this book.

Often the customer is satisfied with the Stock Floor plan arrangement as shown in Plan Book, but does not like type of roof as we have shown. For example where we have shown a flat roof, you might prefer a pitched shingle roof and vice-versa. In such a case we will prepare four (4) new elevations with roof and exterior treatment to your desires, for an additional amount of Fifteen Dollars (\$15.00). This fee is for new elevations only, and **does not anticipate** any changes in sizes or changes in floor plan arrangement, from that as shown in the plan book.

Relative to garage plans, we always include a double garage plan with every set of plans, without extra charge. Size of same is 20 ft. x 22 ft. deep.

## CONTENTS

This Plan Book illustrates two 3-room Houses; 39 4-room Houses; 46 5-room Houses and 41 6-room Houses.

We first illustrate the house with the smallest square foot area and progress the illustrations of houses in order of their square foot area, whereby house having the greatest square foot area will appear on the last page of this plan book.

We do furnish you with the most completely detailed plans available anywhere.

This plan book is published to complement our "**RETAIL LUMBER DEALERS' SERVICE.**" We recommend that you consult **Local Retail Lumber Dealer**, who is a most dependable source of advice for your building problems, and order your plans through them.

# SOLAR ORIENTATION PLAN

Greatest benefits & control of sun rays are usually easily achieved with S. window exposures. TO gain max. advantages of winter sun rays & yet control hot summer sun rays is the perfect result. Privacy from street view & adjacent neighbors is accomplished by intelligent plantings. Perennials shed leaves in Autumn & admit low S.E. winter sun rays, after having given comfort against hot summer sun rays.

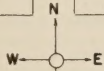

Usually a safe rule to follow is that rooms with N. exposure should be the least used, and likewise the rooms with S. exposure should be the most used, with major window areas for living comfort. Often this rule is incompatible with site conditions, such as mountain, lakes, and ocean views etc.

Another generally accepted rule: that the most desirable view should be given in order of preference, to L.R., D.R., Bkfst. R., & Kitchen, is challenged by many housewives. It is important to make your decisions with your house resale value constantly in mind. Summer sun rays in the early morning are very desirable, but must be controlled later in the day. An E. terrace is a delightful P.M. retreat. An unshaded W. terrace is untenable in the afternoon. Unwanted sunlight may be barred by use of blinds etc. Proper orientation, complemented by correctly placed & sized windows together with thoughtful plantings, is your intelligent approach to home comfort. The entrance front should by no means control the position of major living quarters...

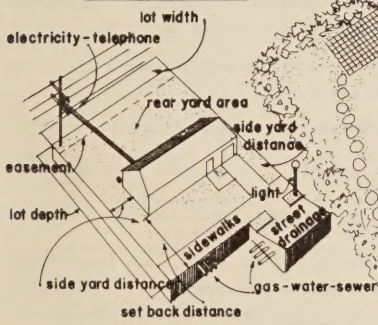

SUN ANGLE VARIANCES in Different latitudes - same hour.

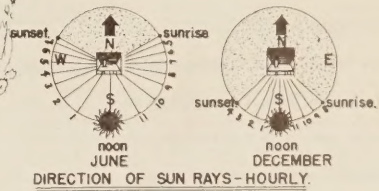

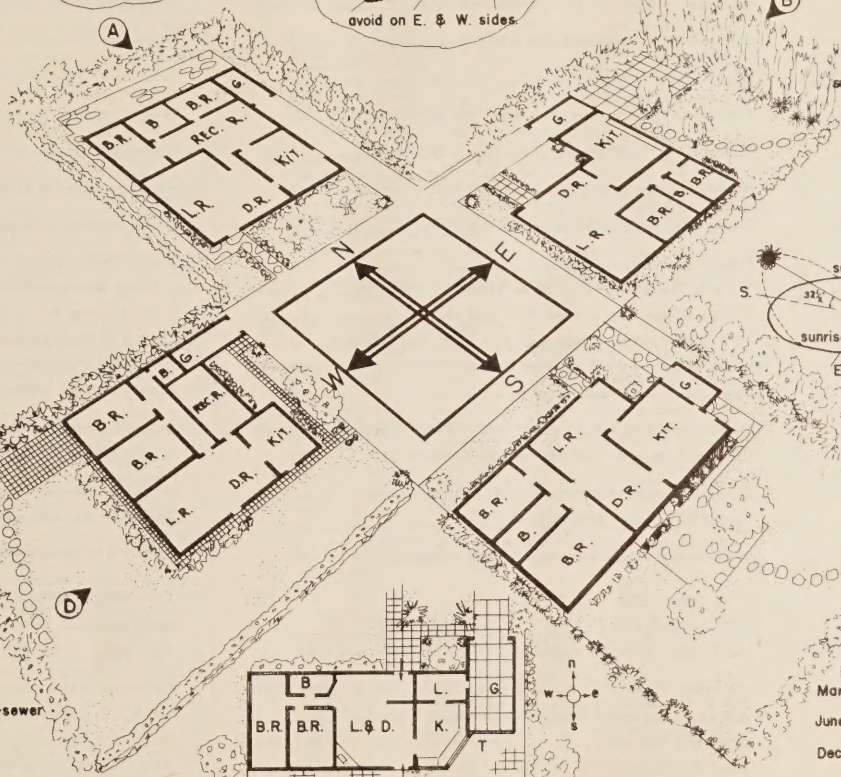

EXCELLENT		GOOD	
B.R.	K.	B.R.	B.R.
L. & D.		L. & D.	K.
FAIR		POOR	
K.	D.	D.	L.
L.	B.R.	K.	B.R.

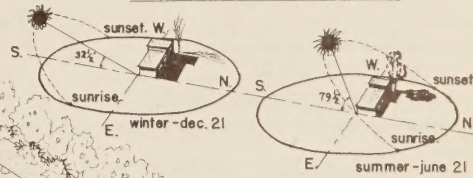

ORIENTATION CHART

LOT CONSIDERATIONS

DIRECTION OF SUN RAYS - HOURLY.

POSITION OF SUN AT NOON - 34° LAT.

## A SIMPLE FORMULA

To determine sun angle at noon in your locality - on important days of

Mar 21 - June 22 - Sept 21 - Dec 22 -

$d = 0^\circ + 23\frac{1}{2}^\circ - 0^\circ - 23\frac{1}{2}^\circ$

$h = \text{alt. or } \angle \text{ of sun above horizon.}$

$d = \text{sun's declination.}$

$h = 90^\circ - | \pm d |$

For example at Los Angeles - 34° Latitude.

Mar. 21 & Sept. 21  $h = 90^\circ - 34^\circ - 0^\circ = 56^\circ$  angle above horizon.

June 22  $h = 90^\circ - 34^\circ + 23\frac{1}{2}^\circ = 79\frac{1}{2}^\circ$  angle "

Dec 22  $h = 90^\circ - 34^\circ - 23\frac{1}{2}^\circ = 32\frac{1}{2}^\circ$  " " "

**A LOT FRONTING SOUTH:** major window areas toward street & East. Place house to rear of lot & close as possible to west side line. Screen front windows for privacy from st. High perennial plantings and low bushes on E. side, protecting against hot summer sun in A.M., & privacy from neighbor. Same planting on W. Dense med high bushes on rear end line, for protection against cold winds...

**B LOT FRONTING WEST:** major window areas toward S. & E. Place house to front of lot & close as possible to N. side. Bushy low plantings on S. side for privacy. Dense med. high plantings on N. side, against winds. High front & rear perennial plantings against A.M. & late P.M. sun rays. Front & rear porches to be trellised or covered...

**C LOT FRONTING NORTH:** major window areas to rear & E. side. Place house to front of lot, close as possible to W. side. E. & W. side calls for high perennials, & low bushy plantings for sun protection & privacy. Med high dense N. front yard plantings for wind break...

**D LOT FRONTING EAST:** major window areas to front & S. side. Place house to front of lot and close as possible to N. side. Front & rear calls for high perennial plantings for sun ray control in A.M. & P.M. Dense bushy plantings on N. side for wind break. Plantings on S. side for privacy only...

# IMPORTANT "PLAN TALKS"

**THE E. A. BRAVENDER SERVICE** located at 4657 Hollywood Boulevard, Los Angeles, California, Zone 27, Phone NOrmandie 2-1843, offers the following services:

A RETAIL LUMBER DEALERS' PLAN SERVICE of House "STOCK PLANS" and "PLANS MADE TO ORDER," of houses or any other structures.

The preparation of the above house "STOCK PLANS" and "PLANS MADE TO ORDER" of houses or any other structure, is under the supervision of **M. J. GABRIELSEN**, 4657 Hollywood Boulevard, Los Angeles, Zone 27, Calif., a Registered Structural Engineer, of California, who offers his services in Structural Engineering in its full scope.

## ILLUSTRATED SEQUENCE OF HOUSE DESIGNS, ETC.

We have started the illustration of our House Designs in this Plan Book by beginning with the House Design having the least "Square Foot Area," and progressing this illustrated sequence throughout the Book. The House Design having the greatest "Square Foot Area," appears on the last page of this Book.

We have used group numbers to designate the number of rooms in a house, viz:—House Designs with numbers in the 500 group, such as 525 are 5 (five) Room Houses; the 600 group, such as 625 are 6 (six) Room Houses; the 700 group are 7 (seven) Room Houses; and the 800 group are 8 (eight) Room Houses, etc.

Closet, Entry Hall, Laundry, Service Porch, Bathroom, Hall, and Covered Porch, are **not** considered as a Room.

All Room Measurements, as shown on the Plans, in this Book, are **net**, or **in the clear**, measurements.

A basement can usually be easily provided for, in our "Stock Plans," if so desired.

Bed Room Closets, shown on "Stock Plans," in this Book, are all built-in Wardrobe Closets, thus affording greater convenience and utility.

## MORE LIVABLE HOMES AND BETTER RESALE VALUE

In presenting this edition of distinctive Home Designs, we have striven to give you a publication illustrating the latest and most skillfully Designed types. Our years of experience in designing thousands of Homes for every part of the World, is here well reflected, thus meriting for us the approval of the most critical minds. Our House Plan Service is a national service conducted by correspondence. We feel confident that our experience enables us to anticipate the needs of Home-builders in every locality.

## THE PURPOSE OF THIS PUBLICATION

This Book is our sales medium for the purpose of selling complete working drawings and specifications of House Designs appearing here. We believe you will receive more value for your dollar spent for our Plans than for any other Plans produced elsewhere in the United States. A trial will prove this statement to you.

## COMPLETENESS OF B. P. PLANS AND SPECIFICATIONS

You will discover that working drawing Plans and Specifications produced by us, leave nothing to the imagination and never cause any misunderstandings between the Contractor and Owner. Every drawing, every detail and every specification clause has been carefully checked. These Plans are 1/4" (one-quarter inch) scale working drawings in Blue Print form, together with specifications, and include the following drawings, viz: (1) Plot Plan; (2) Foundation Plan; (3) Concrete Section Details of foundations, walls, piers, etc., and Fire-place Detailing; (4) Floor Plan; (5) Electric Wiring Diagram; (6) Front Elevation; (7) Rear Elevation; (8) Right Side Elevation; (9) Left Side Elevation; (10) Roofing Plan; (11) Selective Interior Trim Details, doors, windows, etc.; (12) Window Framing Details; (13) Construction Details through side walls, etc.; (14) Details of all Built-in features; (15) Door and Window Schedule; (16) Garage Plans with Construction Details of same; (17) Specifications and Contract between Owner and Contractor.

Our object has been to produce Plans to complete that any Builder could perfectly understand them, and thus supervise the construction of His Own House.

## NUMBER OF SETS OF B. P. PLANS AND SPECIFICATIONS

Each order constitutes three (3) sets of Blue Print working drawings and three (3) sets of specifications at the prices quoted in this Book. There is no reduction made if you take only one set of Blue Print working drawings and specifications. In some cases more than three (3) sets are needed, and an additional charge is made of \$5.00 for each extra set of Blue Print working drawings, and \$3.00 for each extra set of specifications, **ordered at the same time**.

## CLIMATIC CONDITIONS

We are perfectly familiar with the demands in colder Climates. The Plans which will be sent you will be absolutely practical and correct in construction.

## PITCH OF ROOF

In districts where there is a heavy rainfall or a snow load to contend with in winter, then the roof pitch of any of our Designs can very easily be changed by your Contractor, to the prevailing pitch in that district. This changing of pitch does not materially alter the appearance of house design, or incur any construction problem or additional expense.

## ELECTRIC WIRING

Adequate wiring is a "Must" essential in modern day living. We incorporate a separate Blue Print sheet giving the complete Electric Wiring Diagram of each house. We have shown adequate Wiring in each house to constitute an "All Electric House." Should the Owner wish to eliminate any electric outlets on this Wiring Diagram, he may do so, before submitting the Electric Wiring Diagram for bids.

## SELECTIVE SHEET INCLUDED WITH PLANS

We have incorporated one Blue Print Sheet in these Plans which illustrates Steel Kitchen Cabinets, Exterior and Interior Doors, Interior Wood Trim, etc. The object of illustrating the above equipment in a manner enabling the layman to comprehend and arrive at an intelligent decision, means a more accurate meeting of minds between the Owner and Contractor, thus removing many difficulties.

## SCHEDULE OF ALLOWANCES

The last page of the Specifications sets up a "Schedule of Allowances" as between Owner and Contractor for such fixtures and items as Bathtubs, Shower Cabinets, Shower Door or Tub Enclosure, Lavatory Basin, Toilet, Laundry Tray, Kitchen Sink, Hot Water Heater, Water Softener, Steel Kitchen Cabinets, Electric Garbage Disposer, Automatic Dishwasher, Floor or Wall Safe, Automatic Garage Door Operator, Finish Hardware, Electrical Fixtures, Wallpaper, Linoleum, Window Shades and Blinds, etc.

This "Schedule of Allowances" provides that the Owner is allowed to select the brand and type of fixtures, etc., and a specific amount is allowed by the Contractor to the Owner as expenditure for each of the above items; Contractor including these amounts in his Contract Price. If the Owner's selection exceeds the amount set forth in the "Schedule of Allowances," he must pay the excess difference, and, likewise, if the Owner's selection costs less than the amount allowed in the "Schedule of Allowances," then the Owner is given credit for the difference.

In our experience we have found such an arrangement to be most satisfactory and equitable in every way for such installations, etc. This system removes all possibility of disagreement and dissatisfaction as between the Owner and the Contractor.

## THE COST OF BUILDING

The first question usually asked concerning any house design which meets your approval is, "How much will it cost to build?" We have not attempted to give the cost of construction, due to the varied localities where these Homes will be built, and the ever fluctuating costs of labor and materials. We have however given the "Square Foot Area" of each House and would recommend that you have some reputable Building Contractor in your Community, give you an APPROXIMATE COST, basing this cost on the "Square Foot Area" as given in Book. The most capable Contractor cannot possibly give you AN EXACT COST from the small outline plan drawing in this Book. The only way by which you can arrive at a DEFINITE COST is for your Contractor to have the complete working drawings from which to compile his cost sheet. Do not imagine that some of these Homes are beyond your means just because they have exceptionally beautiful exteriors. You will note that there is no wasted space and long dark halls consumed in the designing of these Houses, and therefore they are economic to build. That is where the real skill of design indicates itself.

## SERVICE

It is our large volume of sales which enables us to offer you complete working drawing Plans and Specifications at such reasonable prices. Upon receipt of your order your Plans will be shipped to you without delay.

## REVERSED PLANS AND BASEMENT PLANS

There will be no extra charge for reversing your plans, so as to accommodate the House to the position which your lot faces. Should you desire a full basement under your House for any "Stock Plan," this will be furnished at an extra charge of \$25.00 (twenty-five dollars).

## DIFFERENT EX. WALL CONSTRUCTIONS ARE OPTIONAL

We have learned that many individuals often admire our House Designs, but instead of building with Exterior as the Photograph may show, they would prefer to build with an exterior of Siding, Stucco, Brick Veneer, Solid Brick, Hollow Clay Tile or Partial Brick and Stucco. No matter which exterior finish you will prefer, we will furnish you with the proper construction details to satisfy your desires as to exterior, and without any extra charge.

## TYPES OF WINDOWS

Most of our Houses include both Casement Windows and Double Hung Windows. Should you desire to interchange these from the manner as shown on Plans, it is a very minor change to arrange with your Contractor, because we include detail drawings for both types of windows. Also you may use either wood or steel sash, as you prefer.

## SUGGESTIONS FOR CONSIDERATION IN YOUR HOME

Air Conditioning Unit	Awning	Bathroom Cabinets
Baseboards	Bathtub	Storage Closets
Steel Kitchen Cabinets	Steel Storage Cabinets	Clothes Drier
Shower Cabinets	Automatic Dishwasher	Ventilating Fan
Wardrobe Clothes Closets	Fireplace	Furnace
Porch and Patio	Garage Size	Electric Garbage Disp.
Gutters	Finish Hardware	Bathroom Heater
Circulating Heater	Floor Heater	Hot Water Heater
Insulation	Electric Ironer	Laundry Tubs
Lavatory	Molding, Interior	Package Receiver
Wall Paneling	Electric Refrigerator	Deep Freeze Unit
Roofing, Shingles, etc.	Window Screens	Shutters
Siding Type	Stucco Color	Termite Shield Protection
Stainless Steel Sink	Electric Stove	Water Softener
Porcelain Sink	Electric Washing Machine	Mirrors, Door and Wall
Venetian Blinds	Doors, Ext. and Int.	Book Cabinets
Windows, View, etc.	Canned Food Storage	Entrance Hall
Vanity Dresser	Television Outlets	Electrical Outlets
Radio Outlets	Electrical Fixtures	Barbecue
Breakfast Alcove	Outdoor Living	Landscape
Telephone Plug-in Outlets	Decorating Features	Sound-Proof Walls
Paint Colors	Bathroom Accessories	Damp-Proof Floors

## "PLANS MADE TO ORDER"

While most people can readily select a Home from this large number of Designs which we have submitted, yet there are others who have definite established ideas of their own, regarding the Home which they wish to build. We will draw special plans to satisfy these demands, for any size or type desired. Fill in the "PLANS MADE TO ORDER INFORMATION AND ORDER SHEET." Also make a rough sketch of floor plan desired. Remit one-half the amount. (A such Special Plans figured at ten (10) cents a square foot of floor plan area for one-story Houses; sixteen cents (16) per square foot of lower floor plan area for all one and a half and two-story Houses; twelve (12) cents per square foot for each floor plan area for all Four Family Flats and Apartments. Cost of Blue Print Plans and Specifications for houses built on hillside lots etc., and for all other structures, to be given upon application. Upon receipt of your order we will immediately prepare and mail you an accurate sketch upon which you will mark the changes required, etc., and return to us with balance due. We will then complete these Plans and Specifications promptly and mail them to you. Garage Plans are included without extra cost, when it is a separate construction from House.

## HOW TO ORDER "STOCK PLANS"

In ordering Plans and Specifications from this Book, fill in the information on the "STOCK PLAN INFORMATION AND ORDER SHEET" included in this Book. Give accurate mailing address and remit the necessary amount. The cost of three (3) sets of Blue Print Working Drawings, three (3) sets of specifications for any of our "Stock Plans," is computed upon the basis of three (3) cents per square foot of "House Area," as shown opposite each floor plan, in this Book. Garage plans, single or double, are included without extra cost.

A State sales tax of 2 1/2% is added, for all plans, if you reside in California. Plans used elsewhere are without tax.

If you wish to get Plans and Specifications more quickly, then you may telegraph your order together with the required amount and state the number of Design you wish. Order extra sets of Blue Print Plans and Specifications, with this first order.

## THE IMPORTANCE OF PROPERLY PREPARED PLANS

Complete working drawing plans DO NOT ADD to the Cost of your Home. Complete Plans INSURE AGAINST NEEDLESS EXPENSE. If we could only impress you with the importance of this statement. There is absolutely no selfish motive on our part in this advice that we are giving you. Complete working drawing Plans and Specifications enables the Builder to do His work faster, better, and more cheaply, and eliminates all possibilities of misunderstandings and needless changes and extra charges, etc. You should start in a business-like and intelligent manner and you will have no regrets, as it takes only a very small mistake or a needless delay to offset the price that we are asking you for complete PLANS.

The well Designed Home, properly built, has a good resale value with profit attached to it, whereas an error in design and construction would place your resale value below par with a loss attached to it. ASK YOUR BANKER OR YOUR LAWYER and they will advise you the same as we have.

## ADVICE FOR HOME-BUILDERS

By no means does our interest stop as soon as we have sold our Plans. We hold your best interests in mind until the last nail is driven, and we want you to know that you have not only a Plan Service but also a building Service when you purchase our PLANS. You will always find us ready to render any reasonable assistance that you may need. We will be pleased of the opportunity to serve you.

Here's what

to consider...

★ **EFFECTIVENESS.** The only reason for window screens is to keep out winged pests. RY-LOCK's exclusive features give positive protection...

★ **APPEARANCE.** Of course, the ideal window screen would be *invisible*! RY-LOCKS are so inconspicuous we can't show you even a good picture of them. And they will never stain your house!

★ **SAFETY.** Little children can't loosen RY-LOCK screens. They can't be opened from the outside without destroying the screen... a protection against petty thieves.

★ **ECONOMY.** All things considered... RY-LOCK window screens cost no more than ordinary types. They are all-aluminum for extra long life.

This patented device is the simplest, surest, most effective way ever invented to apply tension on a window screen.

.....

This simple and effective, top bracket permits easy installation and removal. A flick of a finger does it.

.....

This friction adjustment bar permits positive closure at the bottom. It stays put.

RY-LOCK Tension Window Screens have  
been thoroughly Home-Tested.

More than 2,000,000 now in use!

Be sure to Specify **RY-LOCK!**

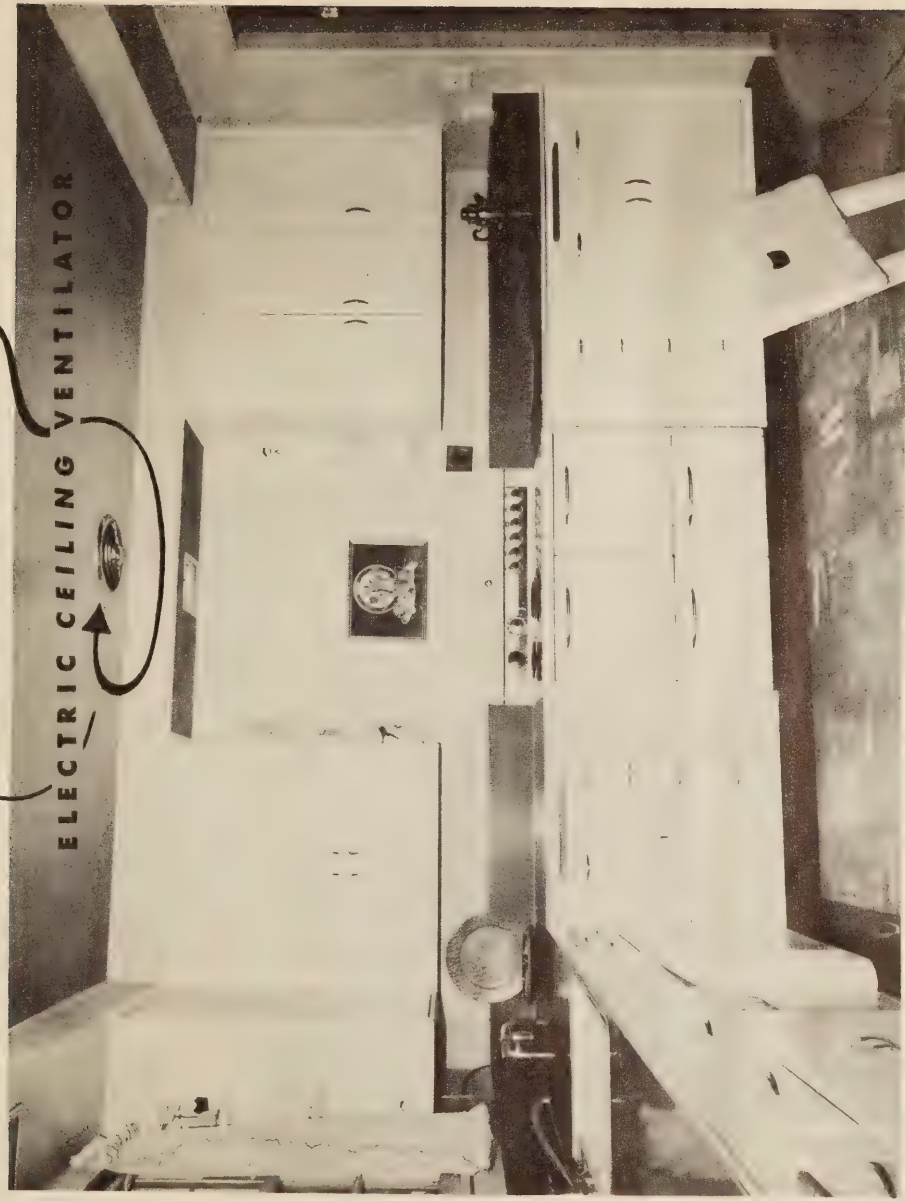

FOR double-hung...metal casement...wooden casement windows...for new or old homes...RY-LOCK has the perfect screen. • SEE THEM TODAY at your Building Material, Lumber or Hardware Dealer's.

**Blo-Fan\***

**ELECTRIC CEILING VENTILATOR**

## *Tops in Appearance ★ Tops in Performance*

**Blo-Fan\*** installs conveniently at the highest point over the range, where a fan belongs—where it blends into the room without interfering with the overall design—where it harmonizes with modern kitchen appointments and appliances.

Blo-Fan combines the best principles of both a fan and blower. The propeller element feeds air to the blower element, supercharging the vortex of the

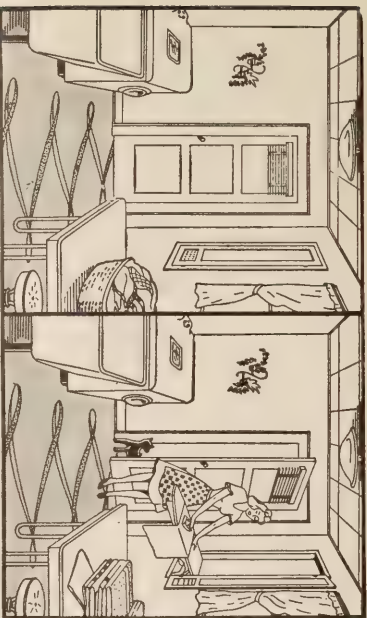

blower so the vanes are fully loaded for peak performance. That's why Blo-Fan delivers more air at moderate speeds than either a blower or a propeller-type ventilator.

\*Trade Mark Reg.

SPOT VENTILATION AT THE POINT OF AIR POLLUTION FOR KITCHEN...BATH...GAME ROOM...AND LAUNDRY

In this utility room there's only one possible place for a modern cabinet-type ironing board — next to the door. The conventional cabinet board would be impractical; would block the entrance, could be used from only one side.

The Eubank Swivel-Type cabinet board is ideal. Swings easily toward window to get best light, allows door to be opened even when ironing is being done. Just one practical installation of the new Swivel-Type cabinet board.

The secret's in the swivel! Eubank patented cast aluminum support gives this improved cabinet board the important advantage of flexibility. Holds board firmly, upright in cabinet, keeps it steady when in use. Eliminates sagging. Built to last. Not one has ever failed under normal use conditions!

**Meets Today's Need  
For Better  
Space Utilization**

*Eubank*

## SWIVEL-TYPE CABINET IRONING BOARD

A leading construction paper reports on a survey which shows that most builders will build small homes—and try to cut costs.

Today's market demands it! This trend will mean a constant search for ways to utilize space more efficiently—for ways to build more convenience and more "sales appeal" into smaller units. The Eubank patented Swivel-Type Cabinet Ironing Board meets this need. It

can be installed where the conventional cabinet board won't fit—where extra space would ordinarily have to be provided.

Feature Eubank! It meets a current need—and will build sales for you. Ideal for apartments, bungalow courts, pre-fab units. Available right now, too, for immediate delivery. Contact your nearest distributor.

### CHECK THESE FEATURES!

- \*Swings through wide arc; ideal where space is limited — in hall, kitchen, small utility room.
- \*Attractive cabinet requires a rough opening only 14" x 57 1/4" x 3 3/4"; recesses in wall.
- \*For old or new homes, apartments, courts. Easily installed before or after plastering.
- \*No projecting parts to tear fabric; firesafe iron storage with aluminum door ventila-
- tor.
- \*Patented cast aluminum support; strong, sturdy. Not one has ever failed in normal use.
- \*Available NOW for immediate delivery. Contact your nearest distributor.

## LEARN ABOUT

### HEATFORM

The Superior Heat Circulating Fireplace • most efficient and durable of all

\* T. M. REGISTERED

**HEATFORM** is your answer to the problems of lost heat and smoke nuisance of the old-fashioned fireplace.

**HEATFORM** air chambers, which surround the firebox and dome, capture heat ordinarily lost and circulate it throughout the home.

**HEATFORM** is a double-walled metal form, scientifically designed, which guides the construction of the masonry walls—hearth to flue—around which anyone can easily complete a fireplace of any design.

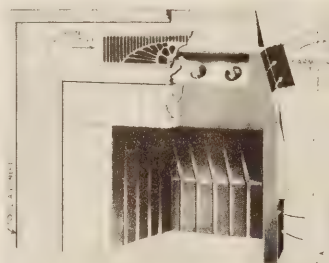

**HEATFORM** is providing utmost satisfaction in thousands of homes, mountain and lake-shore cabins everywhere.

**HEATFORM** does not change the traditional beauty of the open hearth, but does greatly increase heating efficiency with reduced fuel consumption.

**HEATFORM** adds but little, if any, to the cost of the finished fireplace because it consists of firebox, throat, dome and damper—it replaces other materials and reduces labor-time necessary in constructing the old-fashioned fireplace.

**HEATFORM** is easily identified—look for these exclusive features:

- ribbed reinforced firebox.
- heating chambers around the dome and firebox.
- round air passages through the throat.

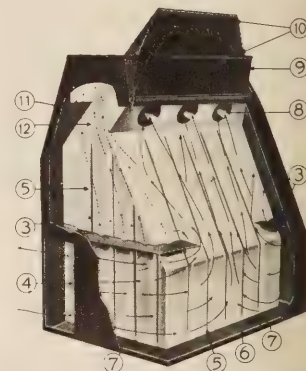

PAT. NOS. 1,987,252, — 2,110,060

◀ At Left, **HEATFORM** fireplace with part of masonry cutaway.

At Right, Rear and Side view of **HEATFORM** ▶ with part of outer metal cut away showing the inside lining of firebox and arrows showing contact of air to all heating surfaces.

# remodel your fireplace

## INSIST ON

\* T. M. REGISTERED

### HEATFORM *delivers more heat, because:*

- Air heating chambers surround firebox and throat—with air passages connecting lower and upper heating chambers at each end of and across the throat.
- Larger air chambers and greater air inlet and outlet capacity.
- Air chambers have no dead air pockets—air contacts all of the heated metal due to horizontal baffle plates and multiple air passages connecting upper and lower heating chambers.

### HEATFORM *gives more years of service, because:*

- Ribbed reinforced boiler plate firebox adds greater strength than ordinary flat metal fireboxes.
- Heated air is removed faster due to larger flow of air over hot metal thus preventing metal from reaching deteriorating temperatures.
- It has no exposed metal parts beneath chimney to rust out due to accumulation of water, soot and ashes.

# MASTER DUTY FAN-TYPE WALL HEATER

# THERMADOR

*First* IN ELECTRIC HEATING

COOLS, TOO! The Thermador Fan-Type Wall Heater switches instantly into a cooling fan for warm weather use.

## SPECIFICATIONS

**VOLTAGE**— All W Series, Built-in Master Duty Fan-Type Electric Wall Heaters operate on 230 Volt AC, either 50 or 60 cycles.

**DIMENSIONS**— Heater grille is 21 $\frac{1}{4}$ " high, 16" wide and extends 2" from wall to edge of louvre; wall box is 18 $\frac{3}{8}$ " high, 14 $\frac{1}{4}$ " wide and 4" deep.

**HEATING ELEMENT**— Nichrome wire resistance coil mounted on mica. Constant air flow over coils, induced by fan action, prevents oxidation and deterioration through red glow and maintains even "black heat". Pre-tested and checked for heating capacity.

**MOTOR AND FAN**— Heavy duty single phase induction motor, Thermador-designed and manufactured. 16 blade turbine-type fan. Motor oil tubes easily reached for normal servicing.

**THERMO-LINK**— Thermal protection device automatically breaks circuit if air flow is obstructed in any way.

**THERMOSTATIC CONTROL**— Thermostatically controlled heaters offer the same features as manual control heaters plus a built in special Thermador 25 ampere thermostat. This extremely sensitive and accurate thermostat assures uniform temperatures throughout the "living zone" at a minimum in operating costs.

**MANUAL CONTROL SWITCH**— Heaters with manual control have single range type switch for full-heat, half-heat and cool fan (except the 2,000 watt heater which has only full-heat and cool fan).

**DESCRIPTION**— Heavy steel construction. Wall box has knockouts in bottom, four extension mounting ears, designed for placement between 16" O. C. studs without extra framing. Heater has special louvre grille designed to force flow of hot air toward floor.

**FINISH**— Available in Desert Sand with hammered effect which can also be used as a base coat for finishing in conformity with room decorations.

**WIRING**— Requires 230 volt line (such as used for electric range or water heater).

For more than twenty years, Thermador Fan-Type Electric Wall Heaters have been successfully used in thousands of commercial and residential buildings, efficiently heating the "living zone" faster than any other device of the same B.T.U. output. Fan-Wall Heaters may be installed between 16" O.C. studs without extra framing and painted on the job to color-harmonize with the walls.

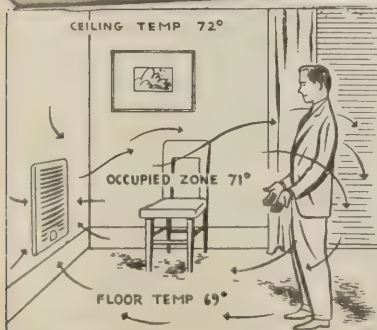

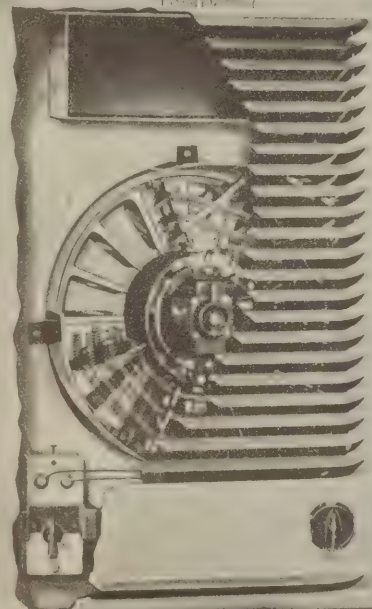

*Accurate thermostatic control insures ease of operation and, coupled with low electric rates assures economy.*

## *"Head to Heels"*

### ELECTRIC BATHROOM HEATER

#### SPECIFICATIONS

**VOLTAGE:** Model LR 161 operates on 120 volts (AC); models LR 162 and LR 202 operate on 230 volts (AC).

**GRILLE:** Highly polished "Lifetime" stainless steel; 9" wide x 48" high; fits flush with wall.

**HEATING ELEMENT:** Highest grade Nichrome resistance wire.

**SWITCH:** Single pole on 120 volt heater; double pole on 230 volt heaters. Switch at top of heater.

**WALL BOX:** Black enameled steel 7 $\frac{1}{8}$ " wide, 4 $\frac{1}{8}$ " high, 4" deep. Knockouts at bottom.

CATALOG MODEL NO.	WATTS	VOLTS	OUTPUT B. T. U. 1 HR.
LR 161	1650	120	5630
LR 162	1650	230	5630
LR 202	2000	230	6824

## REDUCES COST OF MASTER HEATING SYSTEM!

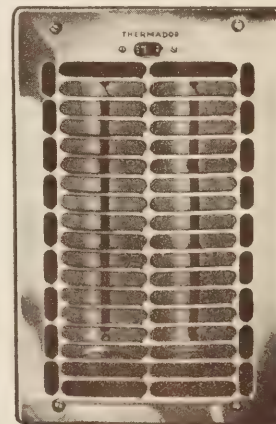

The Thermador "LR" Heater provides all the bathroom heat required . . . effecting substantial savings in the master heating system by eliminating the cost of vents and flues. Further economies are effected in operating costs, because the "LR" heats the one room, only while occupied.

#### FOR THE SMALL BATHROOM

The Thermador Radiant Heater, R type, is recommended for the small bathroom.

The heavily chrome plated steel grille is only 11 $\frac{1}{8}$ " x 16 $\frac{1}{8}$ "; wall box 10 $\frac{1}{8}$ " x 15 $\frac{1}{8}$ " x 4". The double reflector insures maximum reflection and long life. All R types are equipped with a special heater switch.

## "ONE-ROOM HEATING PROBLEM"

# *Sliding Doors* give you more living space

and the name **NORDAHL** is your assurance of quality

Each sliding door in your home gives you up to 12½ square feet more of usable floor space. Furniture arrangement is simplified because there's no wasted wall space. When the door is open, it's out of the way and out of sight! Builders prefer NORDAHL sliding door frames because they're precision built and easily framed in.

NORDAHL gives them a completely assembled frame with a metal reinforced jamb that holds the pocket rigid and true. Weavever phenolic wheels with self-lubricated bearings glide on a metal overhead track to assure quiet and lasting operation.

Wardrobe doors really work when they ride on NORDAHL "Feather Glide" hardware. The overhead suspension principle does it. Weavever phenolic wheels with self-lubricated bearings ride on metal tracks to provide finger-tip control. The doors cannot jump the track. You have no swinging doors to take up space... your clothes are always accessible. NORDAHL hardware is easily installed and any thickness of panel or plywood door may be used. It is as popular as replacement for old wardrobe hardware as it is for new construction. Insist on NORDAHL!

180 WEST ALAMEDA

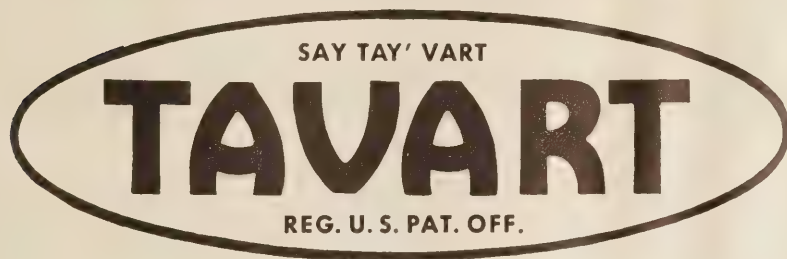

BURBANK, CALIFORNIA

*The plans in this book specify NORDAHL products. Accept no substitutes!*

# YOUR BEST BUY IN OVERHEAD GARAGE DOOR HARDWARE

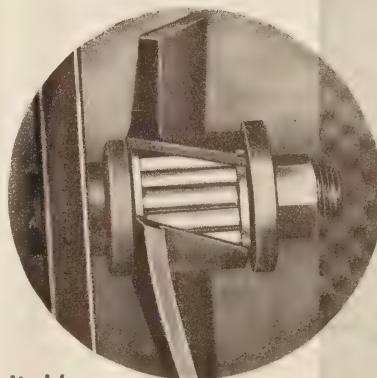

## IT'S ALL ON THE JAMB!

***Saves Space! No Tracks! No Posts!***

Tavart hardware may be used on any one-piece door. A carpenter can build a door on the job or use any stock door. Various materials and designs may be used to carry out the architectural theme of the home.

An original feature of Tavart is the main pivot bearing. This actual roller bearing rides on a special steel shaft and revolves in a steel housing packed with compounded graphite. This insures free-swinging action and long, trouble-free service.

Tavart hardware is made of heavy gauge steel throughout. No cast iron or light gauge metals are used. The movement of the door is powered by tested, oil-tempered steel springs. This insures proper door balance within the specified weight limits. The added kicker feature gives you ease of adjustment, controlled anti-slam action, safety and quiet operation.

*It rides on  
roller bearings*

# Electric WATER HEATERS

When you install an approved electric water heater in your home, you automatically get one of the lowest electric rates of its kind in the entire U. S.—less than one cent per kilowatt-hour.

## ENGINEERED PERFECTION

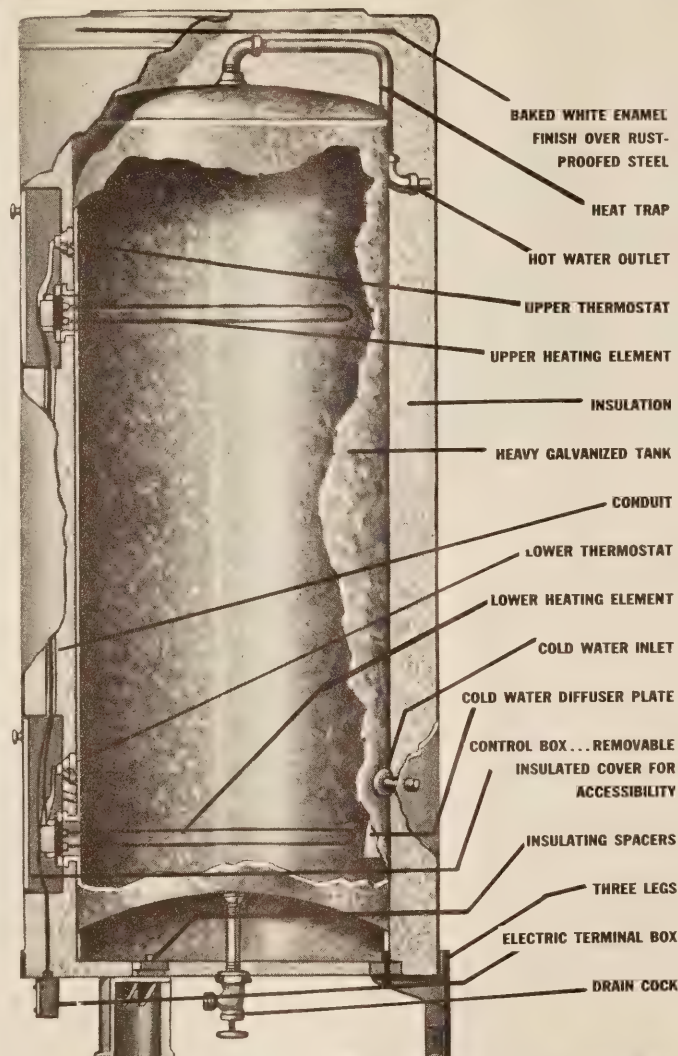

Thermador is a pioneer in the electric water heating field. Experience since 1916 is your guarantee of a product built to give exceptional performance and years of service.

## EFFICIENT

Heat-waste is eliminated in the Thermador Electric Water Heater. Heating tube is immersed directly in the water within the tank to insure 100% heat transfer.

## ECONOMICAL

Special electric rates and the long, trouble-free life of a Thermador Water Heater mean low operating cost and economy.

## DESCRIPTION AND SPECIFICATIONS

**SHELL**—Made of heavy gauge steel, rust-proofed.

**FINISH**—Beautiful, lasting, white baked enamel with black baked enamel trim.

**INSULATION**—Three inches of glass wool insulation of uniform density seals heat within the tank to assure highest economy.

**HEATING UNITS**—Hairpin tube type containing heating coil of highest grade nickel chrome wire with magnesium oxide insulation. Tubes mounted in specially designed flanges which are bolted to tank and easily removable. Heating tube is immersed in water within the tank insuring practically 100% heat transfer to the water.

**THERMOSTAT**—Rugged, snap acting type; easily adjustable over wide range of temperatures. Gives a reliable control of water temperatures automatically.

**WIRING**—All wiring protected by steel conduit. Highest grade copper wire with moisture proof insulation designed for use on heating devices. Standard outlet box located on bottom near front and center.

**DRAIN**—Brass drain cock provided below heater. Easily accessible for connecting hose.

**TANKS**—The tanks are made of the highest grade galvanized copper bearing steel. They are noted for their years of service.

# TABLE-TOP *Electric* WATER HEATER

## SPECIFICATIONS

**Shell:** Heavy gauge steel, rustproofed.

**Porcelain Enameled Top:** One piece, acid and heat resistant porcelain. Top is a single die-formed steel stamping without grooves or cracks to accumulate dirt. Four inch splash shield protects wall.

**Tank:** Extra heavy, galvanized steel tank of highest quality assures durability.

**Recessed Back For Flush Wall Installation:** After rough plumbing is installed, unit is pushed into flush wall position and all connections are easily installed under top of heater.

**Insulation:** Heavy blanket of fiberglass of uniform density seals heat within the tank; prevents frequent reheating, saves electricity.

**Heating Elements:** Composed of highest quality Nichrome imbedded in magnesium oxide and sealed in seamless copper tube. The heating elements are immersed in the water thereby insuring 100% heat transfer to water.

**Automatic Temperature Control:** Thermostatic control automatically keeps water temperature at desired level. Instant power shut-off at pre-set temperature assures safety and economy of operation.

**Steel Diffusion Baffle:** Welded in bottom of tank over cold water inlet, baffle diffuses the incoming water and prevents it from mixing with the water already heated.

**Recessed Base:** Provides comfortable toe-room recess in front; permits heater to fit snugly against wall over 4 inch baseboard. Finished in black, alkali-resistant baked enamel.

**ATTRACTIVE  
MODERN  
COMPACT  
CONSERVES SPACE  
EXTRA WORKING AREA  
EFFICIENT**

Installed alongside the washing machine and laundry tubs, the Table-Top Electric Water Heater takes up little space, provides an ample supply of hot water and serves as a convenient, clean working area.

Installing a Table-Top Electric Water Heater in the kitchen saves space, and the cost of providing a location elsewhere. The good looking white enamel cabinet is the same height as range, sink and counters. Clean flat porcelain top provides additional working area.

# Typical Details R·O·W Is the REMOVABLE (Spring Cushion) WINDOW

## The patented R·O·W principle

### ONE SIMPLE UNIT BALANCES AND WEATHERSTRIPS THIS PRE-FIT WINDOW

The metal "spring cushion" guides of the R·O·W Window substitute for sash balances and provide efficient weather-stripping besides.

Small, corrosion-resistant steel springs on the floating jamb side press the sash guides against the sash with exactly the right amount of pressure, evenly distributed, to permit the raising and lowering of the sash with ease. This constant pressure is sufficient to hold the sash securely in any desired position. Smooth, non-sticking sash operation is assured by the corrosion-resistant metal alloy sash guide surface.

The self-adjusting, uniform spring cushion action of the sash guides together with the rabbeted, close fit of the sash eliminates entirely the so-called ordinary air leaking "sash clearance." Expansion and contraction of the sash under climatic changes is automatically taken up by the spring cushion. The weatherstripping features of the jamb guide design, together with the conventional weatherstripping at sill, head, and meeting rails, assure maximum weathertightness and minimum heat loss. Tests show R·O·W Window infiltration to average 22.1% less than Government specification requirements. R·O·W Windows have been approved by discriminating architects, builders, and home owners, and conform to all F.H.A. and other Governmental agency requirements.

#### For Any Type of Construction

The R·O·W Spring Cushion principle of frame and sash design is applicable to all types of construction—rustic, stucco, brick or pumice block. Modern narrow exterior and interior trim and narrow mullions are obviously possible by the elimination of the weight box. Standard screens and hardware may be applied in the conventional manner.

The R·O·W Window is furnished to the job as a complete, prefabricated, weather-stripped unit, standard in design—ready to install. **And it costs no more than other good window units!**

#### AVAILABLE IN WESTERN SIZES

#### NEVER STICKS, NEVER RATTLES

— because wood windows slide on metal guides. Spring pressure acts as a cushion, and compensates for swelling or shrinkage due to weather conditions. Also — R·O·W's spring pressure assures a tight window — no air leaks, yet no sash binding.

# ALFOL BUILDING BLANKET INSULATION

ALFOL the low cost, modern scientific insulation is manufactured in four types in three standard widths of 16", 20", and 24"; ALFOL is suited for any insulation job in any climate. Choose the type best suited for your particular requirements:

**TYPE 1 BLANKET** consists of one layer of aluminum foil attached to a sheet of vapor proof paper. When expanded and fastened, the foil is suspended in the panel and forms two reflective air spaces. This type is excellent for sidewalls, crawl spaces under floors and garage ceilings.

**TYPE 2 BLANKET** is unexcelled for ceiling insulation, sidewalls, and wherever high efficiency is desirable. Two layers of foil attached to the vapor barrier results in three reflective air spaces that gives maximum efficiency at minimum cost.

**TYPE 3 BLANKET** is identical with **TYPE 1** except that an additional layer of foil is laminated to the vapor barrier paper. In application this blanket is dished in to the side of the studding and results in three reflective air spaces. It is exceptionally good for sidewalls, crawl spaces and unfinished ceilings.

**TYPE 4 BLANKET.** This superior blanket is used wherever highest insulation efficiencies are required. Like **TYPE 2**, it carries two layers of foil within the panel, plus an additional layer of foil laminated to the vapor proof barrier. When dished into the studding it results in four reflective air spaces for the highest insulation requirements.

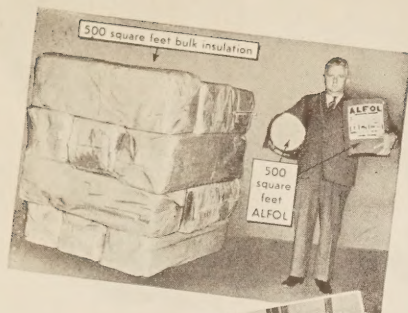

## ALFOL IS PREMIUM INSULATION

Check the advantages of ALFOL. Unlike old fashioned insulation materials, ALFOL'S reflective aluminum foil surface instantly and continuously reflects 95% of all radiant heat. The instant heat strikes its reflective surface, ALFOL goes to work—in winter to keep heat in; in summer to keep it out. In addition to high insulating efficiency, ALFOL offers these premium application features—light weight, durability, unusual cleanliness, permanence. It will not sag or settle and is free from dust, splinters and grit. ALFOL is easy to ship, store and handle.

## REDWOOD FINISHES

Even long lasting Redwood needs Surface Protection. The beauty of Redwood should be preserved with A SUBSTANTIAL FILM OF PROTECTION.

### WE SUPPLY FOUR BASIC TYPES OF FINISHES

1. Clear Gloss Protecting Films
2. Dull Finish Protecting Films
3. Redwood Color Stain and Sealer  
(Living Heart-Wood Redwood Color)
4. Penetrating Redwood Color-Preservative  
(Dry Heart-Wood Redwood Color)

### TYPES

1. Clear Gloss Protecting Films to protect the true natural fresh (wet) living color of the Redwood.
2. Dull Finish Protecting Films where a Dull Finishing Coat is desired. We have formulated a Dull Finishing Coat for Interior or Exterior application.
3. Redwood Color Stain and Sealer to obtain a UNIFORM living heart-wood Redwood Color especially over light colored sapwood streaks ALSO to impart the beauty of Redwood to ordinary fir or other light colored woods.
4. Penetrating Redwood Color-Preservative. This is the most economical type of Redwood maintenance on exterior surface. This color-preservative leaves a dull "mat" finish the color of Dry heart-wood Redwood.

### SPECIFICATIONS

1. Apply three coats **Liquid Raw-Hide Redwood Finish-Clear** on new wood or old porous wood.
2. Apply two coats of **Liquid Raw-Hide Redwood Finish-Clear**, followed by one coat of **Liquid Raw-Hide DULL FINISH**.
3. Apply one coat of **Liquid Raw-Hide Redwood Color**. This is a wood stain and sealer and should only be used as the INITIAL staining coat. May be mixed with Clear to dilute the color tone. Follow with Clear Gloss or Dull Finish.
4. Apply two coats **Liquid Raw-Hide Redwood Color-Preservative** on new or old porous wood. Specify for long life, low cost maintenance on exterior redwood surfaces.
